Tips

PC and PIP modes don't work?	• Check that you have configured the computer on a compatible display resolution (refer to page 15).
Standby	• If the set receives no signal for 15 minutes, it automatically goes into standby mode. To save power, your set is fitted with components that give it a very low power consumption when in standby mode (less than 1 W).
Cleaning the set	• Only use a clean, soft and lint-free cloth to clean the screen and the casing of your set. Do not use alcohol-based or solvent-based products.
Still no results?	• Disconnect the mains plug of the TV for 30 seconds then reconnect it. • If your TV set breaks down, never attempt to repair it yourself: contact your dealer's after-sales service.
